PROFILE

Creative Front-End Developer skilled in HTML, CSS, JavaScript, React, Tailwind, and Next.js. Passionate about building fast, responsive, and user-friendly web apps.
AI & Machine Learning graduate with hands-on experience in Computer Vision, NLP, and Speech Recognition. Proficient in Python and C/C++, with a strong focus on deep learning and smart systems. and committed to continuous learning.

EDUCATION

Faculty of Computer and AI 10/2020 – 07/2024
Banha University
GPA:3.376

Graduation Project: Advanced Self-Driving Car for Egyptian Streets Using V2X Technology
Graduation Grade: Excellent

INTERNSHIPS

Information Technology Institute (ITI),Zagazig branch
Front-End and Cross-Platform Mobile Development Trainee

PROJECTS

Topamine (E-Learning Platform) | Graduation project at ITI
Developed a blog platform with full CRUD operations and role-based auth using React, and json-server-auth. • Built a secure role-based system using React and Firebase, enabling students, teachers, and admins to access dedicated dashboards with custom permissions. • Implemented a teacher approval workflow, where teachers can only join after an admin meeting and manual approval, ensuring platform quality. • Integrated Paymob payment gateway, allowing students to purchase courses directly from teacher profiles and track their purchases. • Developed real-time features, including follow-based notifications for new courses and a messaging system between students and teachers. • Designed admin tools for managing users, banning accounts, viewing platform analytics (students, teachers, revenue), and moderating courses.

Meta Child
Social Media Platform for Children Developed a Facebook-like web application tailored for children using React, Material-UI (MUI), and JSON Server Auth.

Weather App
I developed a responsive Weather App using HTML, CSS, and JavaScript. The application fetches real-time weather data through a public API provided by https://openweathermap.org/api.

Advanced Self Driving Car for Egyption Street Using V2X| Graduation Project
this project is about advanced self driving car using V2X (v2v ,v2i ,v2p) . V2X communication enables the vehicle to interact with various elements like other vehicles, traffic lights, and obstacles. divided into embedded system , computer vision , mobile app for user .

SKILLS

frontEnd:
- HTML ,CSS
- Java Script,TypeScript
- React
- Tailwind CSS, Bootstrap
- Sass
- Material-UI(MUI)

Artificial Intelligence (AI)& Technical Skills
- Python
- Machine Learning ,DeepLearning , Rainforcement Learning
- Computer Vision
- Robotics
- C++
- Object Orianted Programming(OOP)
- Problem Solving

Tools & Technologies
- Git&GitHub
- VisualStudio Code
- Firebase
- JSON Server / JSON Server Auth
- Figma(basic)
